Annotation

The article describes the dependence of the concept of information on individual and ideological threats, the influence of information on the spirituality of our youth.
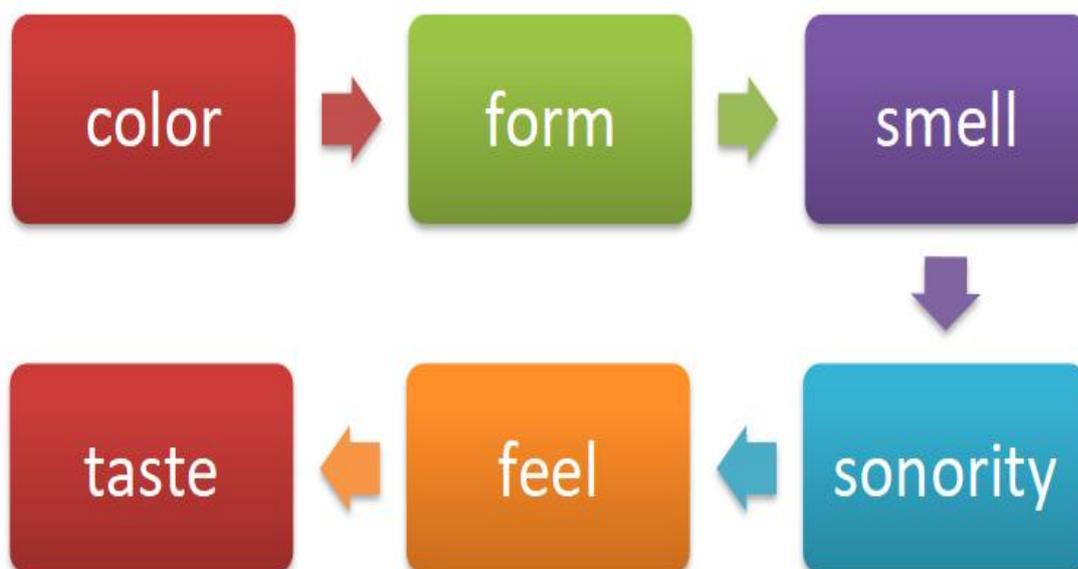

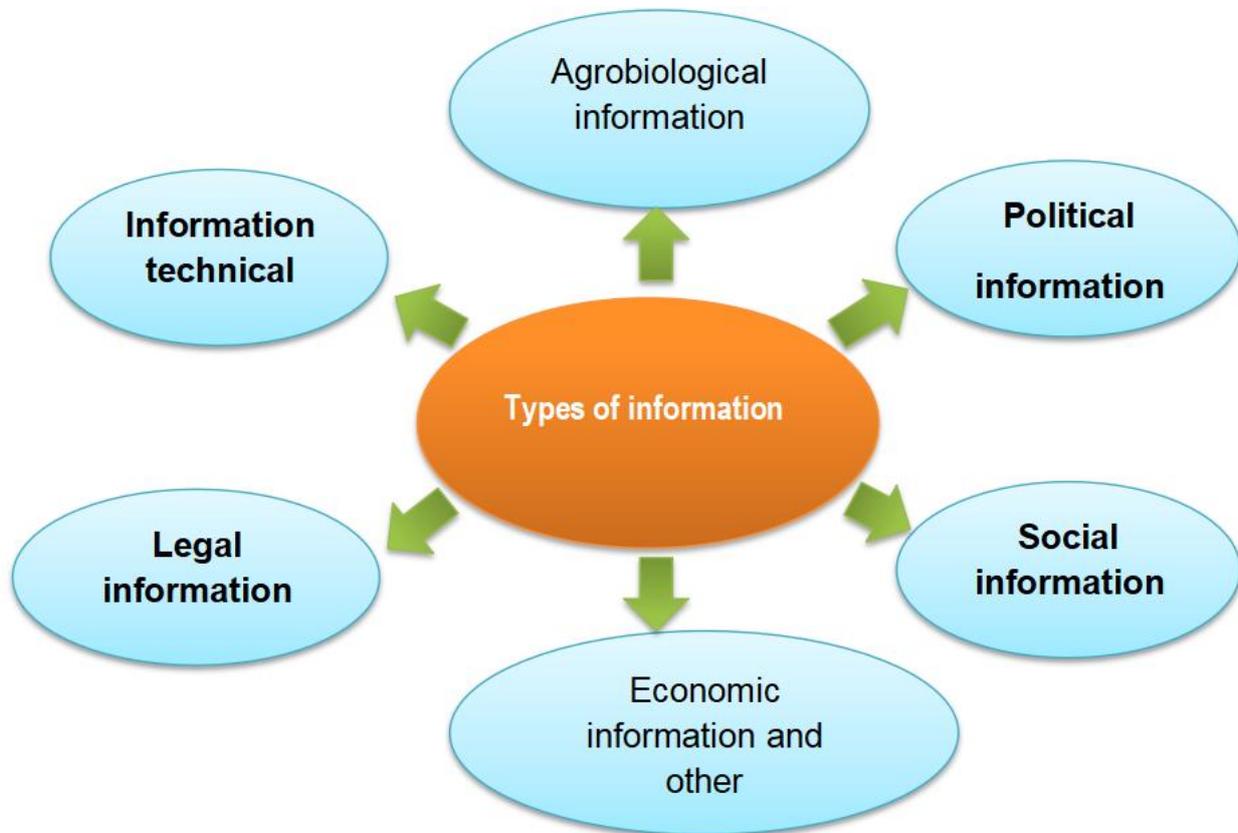

Keywords

Concept of information, logical proof, signals, types of information, information security, youth spirituality, Internet.

Information refers to information about pending or already occurring events. As a means of information-psychological influence. Information is the most effective tool for people. When we logically prove that information has consciousness, because even the simplest methods of conveying information are so powerful that no one can oppose them.[1] Human nature is created in such a way that he cannot live without receiving information and trying to understand it. everyone sees, hears, reads and is continuously influenced by the information that reaches them day and night. Information reception by a person is the presence of a person's consciousness. According to our logical proof above, using this human mind, even the most undesirable idea can be instilled in a person.

Human reception of information. signals

Up to now, modern technologies have developed, and the Internet system is becoming a convenient means of information exchange for people of all countries, regions, and ages. . Types of information are interdependent and complement each other. Among these information, economic information makes up 80% of their volume. This is becoming the most profitable source of information economy.

The information factor is becoming more terrifying than nuclear landfills. [2] If this factor is not taken into account, it will become increasingly stronger and in the hands of certain forces it will become a "weapon". In this regard, security has included another type of information security. Information security (English: information Security, also InfoSec) is the practice of preventing unauthorized access, use, disclosure, destruction, alteration, research, recording or destruction of information. When we talk about the globalization of information and the spirituality of young people, the influence of any information flow on the spirituality of young people, we should consider that the national security of our society and state lies at the root of this issue. When we talk about this topic, two issues become relevant. The first: the flow of information is an ideological threat, and the second is the issue of youth spirituality, that is, the immunity formed in our youth to various types of information. It is necessary to know that what is taken from the social network of the Internet system is correct, reliable and harmless. It is a serious concern that young people, who do not know the difference between good and bad, accept any information spread through social networks as truth.

The influence of the Internet :

A) penetration of alien, destructive ideas (in the example of religious extremism, nationalism, racism, sadism);

B) influence of ideas and views typical of the Western way of life, but contrary to the Uzbek mentality (dressing, smoking, piercing, tattoos, etc.); C) impact of pornographic information on youth education; D) unverified information (boxtons).   Today, production and management, defense and communications, transport and energy, finance and science, education, mass media - all depend on the speed, accuracy, completeness and speed of information exchange. Therefore, the information infrastructure of the society is the target of the information weapon. So, we should not accept all the information as true and use the mass media correctly. It is extremely important that we avoid spreading false information. We need to be aware that the onslaught of information will overtake us.
