The law of supply and demand operates in economics. Where there is no demand, there is no supply. So, in the fight against drug addiction, it is correct to fight first of all for the loss of demand. Young people become dependent on cigarettes, drugs, marijuana and needles to satisfy their needs through external examples and influences. People get used to bad habits mainly under the influence of external factors. People have a strong interest in imitation. Most young people who go abroad to work smoke cigarettes. There is a possibility that this negative habit will spread to other young people.

There are many people who are addicted to smoking to try to see bad smokers. During difficult years, perhaps cigarettes and alcohol were needed to reduce stress. There is no need for this, that is, there is no reason.

A way to get rid of the "New" has been invented. A man who has been smoking for 51 years was able to overcome his bad habit. The taxi driver, who was tired of going far from people and throwing away smoked pumpkin, stuffed the pumpkin with caraway seeds instead of caraway seeds. The nose usually dropped 4 pieces of cumin under the tongue when it was in a bad mood. Over time, the cumin softened and he began to chew it one after another. As a result, he got rid of both constipation and nausea.

It is also possible to find a solution on how to get rid of cigarettes. As a result, it keeps the lungs healthy and prolongs life. Negative role models for children are avoided. Children of smokers find hidden cigarettes and try to smoke them. There is no need to prove it. Curiosity in children has happened to all of us.

Smoking cannabis and needle addiction is a serious disease. But this can also be treated. First of all, it is necessary to identify drug addicts. This is a complex process. Smokers and their relatives try to hide this disease for a number of reasons. They resist. They also come up with the philosophy they need. "My life, I live as I want", "My money, I don't ask you for a loan", "What law says that it is possible to limit the rights of a citizen living peacefully without causing harm to anyone or anything?", "There are no such prohibitions in world practice," and so on Everyone is right and everyone knows. He does not know that the child of a drug addict will be born disabled and that this disabled citizen will receive social protection at the expense of government funds. A disabled child does not even know that he will be cursed for life. Secondly, the drug addict himself does not live long. Thirdly, when he does not have money to buy drugs, he becomes a dangerous person, ready to do anything and becomes a dangerous person for society. He may even commit murder for money.

It is very correctly said that drug addiction is the plague of the century. Fighting addiction is just as important as fighting an external enemy. We cannot shoot our citizen. He is our compatriot. If we force him, if we give him a treat, he will thank you later. Family members will also be happy. When our fellow countryman takes the right path, society will receive more benefits. Join us in the fight against drug addiction. This helps in implementing preventive solutions.

But how to identify a drug addict using bloody methods and how to calm loved ones who resist forcing him to seek treatment? How can this be treated in the short term? How do you get drug dealers out of this way (of big profits)? Let's force foreign businessmen to give up and come to the conclusion that there is no demand in Uzbekistan and look for other markets.

The fight against illegal border crossing, internal trafficking and production is not producing the expected results. Much public money is spent inefficiently. Evidence suggests that addiction is growing. It's time to end this plague.

Public methods of identifying patients are ineffective. What if a practice that is effectively used to identify car offenders was adopted? One solution could be to reward the informant for accurate information while keeping the identity of the patriot secret and guarantee that no problems will arise in his future life, protect him, and include him in a secret list of affiliated persons. . Why is the presence of an affiliate list guaranteed? Drug trafficking is widespread, and even among the recipients of information there may be enemy informers. It's good that there is a full guarantee

The patient's identity has been established. Now it needs to be treated. Compulsion to treatment is natural. It is also important that the Supreme Assembly amend existing laws and decide to limit the use of civil rights by decision of a civil court during the treatment of a patient. Otherwise, complaints may intensify and negatively affect the treatment process. The identities of attending physicians must be kept secret and protected by the state. The main goal is to return the citizen to a healthy life. According to unconfirmed reports, the patient must be buried standing up to his neck in the ground and kept in the ground for three days and nights, giving him food. Then unnecessary substances in the body go into the soil. This is just an unsubstantiated statement from people's mouths. True solutions to treatment should be sought in the works of Ibn Sina. Modern medicine can also offer effective solutions.

If the patient himself wants to be treated and helps the doctors, together they will overcome the disease faster. One of the families returns to a carefree life. Society will also benefit greatly.

My family, my children often drag the children of working citizens into drug addiction. It is very important to take parenting seriously. More important than business. Unfortunately, theses and articles of this kind are not read by business people. They don't have time. It doesn't get into the press.

It is necessary to warn people who make a living brokering drugs, and inform them in the press that the fight against buyers did not begin because of the introduction of drugs. So that they understand that their proposals will not be accepted and will go bankrupt when there is no demand, and get themselves together. There is no point in filling prisons.

These criminals also have children. Children should not be equal to their father's love. Even so, those who have not recovered must be ruthlessly handed over to the hands of the law. They will

need to be fed, clothed and not kept in prison, but used in an artificial forest built on the site of the island-sea. So that he can compensate for the food he eats at the expense of the state. It wouldn't hurt to show on video the plight of those trying to escape. It's good that the law should be strict. So that he deeply feels the consequences of limiting his citizenship. Let him justify the value of citizenship.

Let's carry out targeted work with each drug addict, not with drug addiction, but with their treatment. Let us save our society from this pernicious menace. Let's take the concept of supply and demand as a basis.
